

# AVRUT – Project Management and Schedule Management Platform

24<sup>th</sup> March 2016 – Ahmedabad, India – Avrut is an enterprise wide platform designed to automate all processes related to standard architectural and engineering practices.

## Project Management:

The Project Management system designed at Avrut makes sure that you achieve all the project goals and objectives while honouring the preconceived constraints. Avrut creates all the project information such that it can be managed from a single screen. Managing project timelines is simplified due to a variety of options. Processes like Project planning, Automatic updates, Time estimation, Data retrieval and Project status can be easily carried out with Avrut's Project Management System.

## Key Features:

1. Creates and manages all project information from single screen.
2. Manages status of project (Active, Hold, Archive, Scraped)
3. Plans projects using proprietary templates
4. Automates project reports, data Generation and alerts
5. Plans and estimates project time and resources
6. Quick and easy retrieval of legacy project data
7. Accurate Project Status updates

## Task and Schedule Management:

Time is Money equation stands true when it comes to manage tasks, schedules and co-ordination of entire team and clients. Time spend on productive work makes money, may be in terms of a successful task completion or a successful client meeting, on the other hand, time taken to do all those clerical work like fixing up meetings, spending energy to remember scheduled meetings, assigning tasks to team members, keeping their track, taking their reporting, arranging site visits and keeping well with MOM.

## Key Features:

1. Generates, assigns and manages activities and tasks for organization/projects
2. Flexible and Integrated design process workflow and task management
3. Automates Intimation of tasks assigned
4. Allows traceability of decisions and accountability
5. Monitors actions and reports
