6 January, 2018– Rome, Italy – Access to a new resource has been added to the PM World Library (PMWL) related to the management of ICT projects. The new resource is titled “**8 common project management mistakes — and how to avoid them**”. This article is a blog post by Jennifer Lonoff Schiff on cio.com.

So many projects, so much mismanagement! That's the refrain of many IT executives. Indeed, even with project management software, IT projects often wind up taking longer (much longer) than planned and costing more than budgeted. While no two projects are exactly the same, the issues that can affect and potentially jeopardize them are often quite similar. And even good project managers can make mistakes when wrangling a big, complex project or when being bombarded with change requests. Here's what IT executives and project management professionals told cio.com are the all-too-common mistakes they see project managers make and advice for avoiding them.

To access this new resource, go to the Industries and Organizations section of the PMWL at <http://pmworldlibrary.net/industries-and-organizations/>, scroll down and click on “Information and Communication Technologies”, scroll down to article. Must be registered and logged-in as Free Trial, Professional or Scholar Member to access.
