

The Role of Computer Security Incident Response Teams

Access to research work on Incident Management by Robin Ruefle added to PMWL

Resource provided by [Livinus Nweke](#)

24 January 2018 – Rome, Italy – Access to a new resource has been added to the PM World Library related to the Security of Project Data, Information and Systems. The new resource is titled **The Role of Computer Security Incident Response Teams in the Software Development Life Cycle**. This research work published by Robin Ruefle on United States Computer Emergency Readiness Team (US-CERT) website.

As observed by the author, Computer Security Incidence Response Teams in organizations performing software development and in related customer organizations may have valuable information to contribute to the life cycle. They may also be able to learn valuable information from developers concerning the criticality, operation, and architecture of software and system components that will help them identify, diagnose, and resolve computer security incidents in a more timely manner.

To access this great resource, go to the Applications and Hot Topics section of the library at <http://pmworldlibrary.net/applications-and-topics/>, scroll down and click on “Security of Project Data, Information and Systems”. Must be a registered trial, professional or scholar member and logged-in to access.

For post in PMWL
