4 Critical Cyber Security Trends for Projects and Organizations In 2018

Access to new resource related to security of project management information added to PM World Library

Resource provided by [Faith Onwunalu](#)

24 April 2018– Rome, Italy – Access to a new resource has been added to the PM World Library (PMWL) related to security of project management information. The new resource is titled “*4 Critical Cyber Security Trends for Projects and Organizations in 2018*”. This article is a post by Brad Egeland on PM Times.

There are some new developments in IT of course and in project management related to project security and we need to be paying attention. Hacking and cybercrime are on the rise. It's changing technology, it's changing the landscape of the data and sensitive information on the projects we are leading, and it should definitely be changing the way we plan for and approach these projects we are managing.

According to the author, getting hacked isn't just something that happens to someone else anymore. It's happened to more than 40% of my project and consulting clients to some degree over the past 2-3 years and that number will only go up. Here are four areas where I see cyber risks affecting our organizations, project management infrastructures and the actual projects we are managing starting right now and heading into 2018 and beyond...be ready, and proactive or be sorry.

To access this new resource, go to the Applications and Hot Topics section of the PMWL at <https://pmworldlibrary.net/applications-and-topics/>, scroll down and click on “Security of Project Data”, scroll down to articles. Must be registered and logged-in as Free Trial, Professional or Scholar Member to access.

This new resource provided through the PMWL university research internship program; [to learn more, click here](#)
