

Research Internship for Students of Project Management

PM World, Inc. is a digital publishing and information services company based in Addison, Texas, USA. The company publishes the monthly online *PM World Journal* (ISSN: 2330-4880) at www.pmworldjournal.com. The journal has been published monthly since August 2012, is indexed by EBSCO (one of the world's largest database providers for libraries and universities) and is now recognized as one of the leading online publications serving the global project management world.

Launched in February 2014, the **PM World Library** (PMWL) at www.pmworldlibrary.net provides an archive for all works published in the *PM World Journal*. Both the journal and library are focused on the global program and project management (P/PM) field, which is rapidly growing in government, industrial and non-profit organizations worldwide. Organized to resemble a digital version of a more traditional library, the PMWL is growing into a robust specialist library for those involved with projects of all kinds. Access to a wide variety of resources is now included, with more resources being added on a regular basis.

PM World offers several unpaid research internships for students of project management to conduct research and assist with populating the PMWL. Communications and work is performed virtually. Approximately 1-2 hours per week of work is anticipated (based on student's schedule). Academic reference required (professor or university administrator). Benefits to successful candidates include: **5 years of free access to all contents in the library**; individual intern showcase webpage where profile and research results are posted; recognition on team pages on the PMWJ and PMWL websites, and with each contribution; opportunity to learn more about program/project management, and to deep dive into specific topics; introduction to other interns around the world; **Certificate of Completion** and **Letter of Recommendation** on successful completion of internship. Participating students are generally at the graduate level, studying for a master's degree in or related to project management. See participating interns at <https://pmworldlibrary.net/university-interns/>

This position may or may not qualify for university credit (students are responsible for applying for university credit). Internships are for approximately 20 weeks, during which interns are expected to contribute 16 research results (one per week in a standard format), after which students can add the experience to her or his résumé for career purposes. For more information, contact Editor@pmworldjournal.com or Help2@pmworldlibrary.net.
