

Biodiversity Service Launch Press Release

FOR IMMEDIATE RELEASE

Tunley Environmental Launches New Biodiversity Services to Support UK Government's Biodiversity Net Gain Requirement

Leeds, 16/11/2023 - Tunley Environmental, a leading provider of sustainability consultancy services, has announced the launch of its new biodiversity services in response to the UK government's commitment to enforce a 10% Biodiversity Net Gain (BNG) requirement for developers in England starting in January 2024.

Biodiversity plays a crucial role in ecosystem stability and function, and with the impending BNG requirement, developers, businesses, and organisations are seeking support to assess their impact on biodiversity and achieve the Net Gain targets. In light of this, Tunley Environmental is poised to offer comprehensive services to meet these needs.

The newly introduced biodiversity services include:

- Biodiversity footprinting
- Biodiversity net gain
- Biodiversity risk assessment

With a team of experts in ecology, biodiversity, and conservation science, Tunley Environmental is well-positioned to provide tailored consultancy services that meet the unique requirements of clients.

"Our goal is to assist developers and organisations in creating landscapes that thrive with biodiversity while promoting sustainable development," said Tara Garraty [Biodiversity Specialist and Sustainability Scientist] at Tunley Environmental.

About Tunley Environmental:

Tunley Environmental is a leading sustainability consultancy firm dedicated to providing expert advice and support for biodiversity and carbon reduction initiatives. With a focus on sustainable development, the company offers a range of services to assist clients in achieving environmental compliance and a sustainable future.
