Introduction

AI Project Power: Reimagining Your Role in the Age of AI arrives at a critical time where concerns of AI replacing jobs in the project management space are prevalent. Author Mei Lin encourages members of this astute (project management) profession to adopt AI as a transformational capability while holding on to the beauty of being humans who enhance the value of work, teams, and overall livelihood.

Overview of Book's Structure

The book is organized into clear thematic sections that not only guide readers from core concepts of AI but references how the role of a PPPM (Project Program Portfolio Manager) acts as the Human in the Loop (HITL) to maximize collaboration between humans and AI. Early chapters provide accessible explanations of what AI is and what it is not through demystifying terminology and without overwhelming readers.

The structure of the book flows seamlessly into AI integration strategies which offer concrete examples of where AI can streamline daily processes, improve risk forecasting, and strengthen stakeholder communication.

The structure supports progressive learning, allowing readers to build confidence before exploring more advanced concepts.
